EDUCATION

Bachelor of Computing, Software Engineering (Co-op)

Sept 2023 - Apr 2028 (Expected)

University of Guelph – Minor in Marketing | GPA: 3.6/4.0 | Dean's List: F23, W24, W26

Guelph, ON

EXPERIENCE

Software Engineer Co-op (Return Offer)

May 2026 - Aug 2026

TD Bank

Toronto, ON

- Prevented double enrolment under concurrent requests by engineering a Spring Boot enrolment endpoint with table-level locking, enforcing promotion eligibility and branch budget limits in real time.
- Integrated live customer data into the Customer Incentive Rewards enrolment form using redux for state management, wiring API service calls to sync frontend state with backend eligibility checks.

Undergraduate Teaching Assistant (2 Terms)

Jan 2026 - May 2026, Sept 2024 - Dec 2024

University of Guelph – Intro to Programming (C)

Guelph, ON

- Reduced recurring C programming error among 100+ students as measured by lab completion rates, by leading hands-on terminal sessions covering debugging workflows (nano, SCP) and structured code review techniques.

Software Engineer Co-op

May 2025 - Dec 2025

TD Bank

Toronto, ON

- **Cut permission assignment time by ~95%** across the ECMS Personal Banking platform by delivering the TD Canadian CRM Admin Tool, from initial design through production deployment.
- **Improved system reliability by 30%** as measured by code coverage metrics, by designing and shipping comprehensive JUnit and Mockito test suites across a production-grade financial services codebase.
- Delivered key frontend and backend components for a production Customer Notifications feature by building React interfaces, Spring Boot APIs, and caching services supporting notification management workflows.

PROJECTS

Replica – Desktop Duplicate File Cleaner

Summer 2026

Electron, React, Node.js, SQLite (better-sqlite3)

- **Reduced redundant hashing by 80%+** with a two-phase engine (metadata pre-filter → SHA-256 full hash), avoiding full-file reads on obvious non-duplicates
- Cut re-scan time from **8s to under 1s on 10,000-file** directories via SQLite-backed caching keyed on path + mtime
- Eliminated local server overhead entirely by replacing REST/Express with Electron IPC, cutting inter-process latency and simplifying the deployment story

HomeHero – Household Management App

In Progress

Swift, Java Spring Boot, Supabase, MyBatis, TCA, Docker

- Architected TCA-based state management coordinating 4 interconnected features (Groceries, Chores, Expenses, household views), ensuring predictable, consistent data flow across all household member screens
- Built secure Spring Boot REST APIs handling JWT-based authentication, role-based permissions, and real-time data sync via Supabase, improving cross-device data reliability.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, Swift, Python, C, SQL, R, HTML/CSS

Frameworks & Libraries: React, Redux, Spring Boot, Node.js, Electron, TCA, Three.js, JUnit, Mockito, Zustand

Cloud, DevOps & Databases: AWS, Salesforce, Docker, Firebase, PostgreSQL, MySQL, Supabase, SQLite

Tools & Methodologies: Git, Linux, Jira, Agile (Scrum), Figma, Adobe Creative Suite, CI/CD, Maven
